Moving your data center is no simple task, but it need not be an overwhelming one.

Months of planning can go into organizing a successful data center move. The logistics are complicated by the technology involved and by the scale of the data center move.

All American will facilitate the process by working with the project leader and specialists and others as necessary for weekly planning sessions. Our experts can help your company calculate the acceptability of downtime during the data center move. Some companies opt to transfer all data to the new location and launch the new data center before they shut down the old system, thus preventing disruptions. All American can help you decide what the best option is for your business.

When the data center moving day arrives, All American’s move team can relocate all key pieces to the network operating center computer equipment and to prevent against unanticipated disruptions.

Our approach maximizes data center flexibility while simplifying the data center moving procedure.

All American will Protect and Relocate your Sensitive Electronics with Care

- Remove, pack and prepare server components into rolling stock crates designed for electronic equipment
- Protect components with anti-static shrink wrap or bubble pack
- Protect cabinets and equipment with pads and shrink wrap
- Provide ship-sheet protection between components. Baffle with sealed air wrap
- Provide floor protection; metal plates over thresholds to reduce shock and vibration
- Coordinate handling and transportation
- Restore all server equipment and components into cabinets, and position as directed
