## Planning for a Successful Move

Planning a move is a daunting process, and the last thing on your mind should be the safety of your most fragile keepsakes and valuable household goods. That’s why it’s so important to properly pack your belongings for additional peace of mind. While you can save money by packing everything yourself, hiring a mover to pack some or all of your belongings can save you a lot of time, energy and stress. A professional mover also has the skill to pack your belongings in a way that minimizes the chance of damage.

Cut your stress and anxiety in half by taking extra time to carefully think through what and how to pack.

### Packing

If you decide on do-it-yourself packing, plan ahead at least six weeks to pack.

- Before you start packing, identify the items you want to throw away, give away or sell.
- Moving is a good time to de-clutter your home. It’s an opportunity to save time, money and space. Plan ahead and give yourself enough time to make these decisions.
- Don’t just start packing – plan how you will pack.
  - Pack items you seldom use first.
  - Pack items of similar size and weight together.
  - Don’t make any carton too heavy to easily lift.
- Obtain a list of “non-allowables” on your moving truck – these include aerosols, batteries, fertilizer, flammable materials/substances, etc. Plan ahead to carefully pack and transport these materials.
- Consider how you will handle perishable items. Empty and unplug your refrigerators and freezers keeping appliance doors open for at least 24 hours in advance of loading.

### Packing Preparations

Here are a few general suggestions that will make packing easier:

- Plan how you will pack. Pack items first that you don't use often.
- Start packing as soon as you find out you're moving.
- Never pack flammable items or non-allowable items.
- Use generous amounts of paper inside the carton on the top and bottom to provide good cushion.
- List contents and room on the outside of the carton.
- Clearly mark "Fragile" on the outside of cartons.
- Use clean newsprint paper. Old newspapers may work, but use them carefully because the ink may rub off onto your items.
- Write "Open First" on cartons containing essential items such as cooking utensils, toiletries, etc.
- Separate breakables and non-breakables.
- Pack all cartons tightly.
- Use professional packing tape. Masking tape isn't strong enough to support fully packed cartons.

### Packing Materials and Crates

We have all the materials you need to properly pack your belongings. Unprinted newsprint, acid-free tissue, tufted paper padding, bubble wrap and packing tape.

Items such as antique furniture, marble and glass top tables, trophies and chandeliers are best transported in custom-made crates. We can crate these types of items for you.

### China

Carefully wrap china in sheets of clean newsprint paper. Place newsprint paper in the bottom of a Dishpak for cushioning. Wrap each piece individually then wrap up to three in a bundle with a double layer of paper. Place these bundled items in the carton in a row on edge.

Surround each bundle with crushed paper, being careful to leave no unfilled spaces. Add two or three inches of crushed paper on top of the bundle to protect rims and make a level base for the next tier. Horizontal cardboard dividers can be helpful in keeping layers level. Smaller plates, saucers and shallow bowls can make up a second layer. Wrap and pack in the same way as larger items.

### Silver

Silver is nested together and wrapped. The nested packs are cushioned in the silver chest. The chest is then wrapped in clean paper.

### Stemware

Stemware is individually wrapped with protective paper inserted into the goblet and around the stem. Each goblet is cushioned by a thick wrapping and placed stem up in a specially tiered Dishpak.

### Soft Goods

Soft goods like pillows and bedding are packed in lined cartons separated by layers of clean paper.

### Shoes

Pack shoes in their original shoebox, if possible, and place in a carton. If shoeboxes are not available, individually wrap them to prevent abrasive damage

### Clothes

Clothes are left on hangers and hung in special wardrobe cartons.

### Lamp Shades and Bases

Handle lampshades by their wire frames only and place in a carton lined with paper. Surround the shade with protective paper. Shades can be nested inside each other, as long as they are separated by paper.

### Stereos and other electronics

If possible, pack electronics in their original cartons. As long as proper packing materials are used (bubble wrap, newsprint, foam sheeting, comforters/blankets, pillows, etc.), electronics can be safely packed in sturdy boxes.

- Start by padding the bottom of the carton with a generous amount of packing material.
- Wrap electronic with paper and place in carton.
- Tightly pack padding around and on top of the unit to prevent damage.
- Firmly seal the carton.
- Label the carton as “Fragile – Top Load.”

*Note: When you unpack your electronics, let them reach room temperature before plugging them in.*

### Record albums, tapes, CDs, DVDs

Stack these items on their ends (instead of laying them flat) so they can absorb shock with less chance of damage. Pack tightly, so they’re secure and can’t shift around in the boxes.

**FAYETTEVILLE**

810 Tom Starling Road  
Fayetteville, NC 28306  
910.438.0820

**Books**

Lay books flat in the carton, alternating the spine and open side of the book. Place a piece of paper between books to prevent them sticking together. Because books are heavy, we have a small book carton to make them easier to carry.

**Statuary and Figurines**

Wrap statuary and figurines with bubble wrap, then snugly wrap with clean paper. If bubble wrap is not available, use clean paper to wrap the article until it is adequately cushioned.

**Bottles**

Bottles are taped shut and wrapped in clean newsprint. For extra security, place bottles in a resealable, watertight bag before wrapping and placing in carton.

**Mirrors and Glass**

Cross the glass with a series of masking tape “Xs” to help strengthen the glass. Wrap the picture or mirror in a generous cushion of clean paper. Place in a flattened packing or telescoping carton. Carefully tape and seal the carton. Always stand glass, pictures and mirrors on their edge. Do not lay flat.

**Computers**

If possible, pack computers in their original cartons. As long as proper packing materials are used (bubble wrap, newsprint, foam sheeting, comforters/blankets, pillows, etc.), computers can be safely packed in sturdy boxes.

- Start by padding the bottom of the carton with a generous amount of packing material.
- Wrap computer parts generously with paper and place in carton.
- Tightly pack padding around and on top of the unit to prevent damage.
- Firmly seal the carton.
- Label the carton as “Fragile – Top Load.”

*Note: Be aware of special considerations for the internal workings of the computer.*
